

Assignment : #5

Description : Your App Status

Class : CPW 253 Spring 2023

Instructor : Ken Meerdink

Student : Tung Kim

Project : Simple Calculator

So far I have been able to achieve over 25% of my project as followed:

1. Created 3 Fragments: Calculator, History, Feedback
2. Successfully organized 3 fragments into Tabbed Interface.
3. The Simple Calculator in Calculator fragment is now working properly:
  - a. Created 2 TextViews to display full input of the equation and current user input.
  - b. All buttons work. All TextViews displaying information properly.
  - c. Display error for divided by 0.
  - d. Users could use the result of the previous equation as operand 1 for the next calculation without having to click on the Clear button to start over.
  - e. If the operator is selected by mistake, Users are able to change the operator by clicking on another one without messing with a negative sign.
  - f. Automatically add 0 to front of a double number if users click the “.” Button first.

My targets for next stage:

1. Make the other 2 fragment work properly
2. Determine which features should be added to my app to make it more useful.
